

RIVERSIDE PARK

In June STRACON was awarded a contract to carry out the earthworks construction phase of Stages 1 and 2 of the Riverside Park Subdivision. This new development is located in Albertain, close to the Wanaka township in the Southern Lakes District.

Earthworks involve the movement of approximately 130,000 m³, and consists of stripping topsoil, cut to waste, cut to fill and topsoil re-spreading operations. When completed the development will have a total of 224 sections ranging from 700m² to 1,850m² in size.

The client, Infinity Investment Group, aims to maintain the highest standards in recreational living, and it is proposed that Riverside Park will have a true community feel with neighborhood reserves, a communal complex and swimming pool, extensive walkway linkages and mountain-biking trails, all facilitating an active lifestyle.
